Imprivata Confirm ID for Clinical Workflows

Fast, convenient authentication for clinical workflows

Key benefits

- Increases clinician efficiency by replacing passwords with innovative and convenient authentication methods
- Integrates seamlessly with leading EMRs and other applications to enable fast, secure clinical authentication workflows
- Improves regulatory compliance and auditing with increased visibility into user interactions with PHI
- Simplifies authentication management with a single, centralised platform for all enterprise workflows

Imprivata Confirm ID® for Clinical Workflows improves security and regulatory compliance by enabling fast, secure authentication for clinical workflows.

To deliver safe, effective, and compliant patient care, clinicians are often required to authenticate clinical transactions such as medication ordering, witnessing medication wasting, computerised physician order entry (CPOE), and blood administration, among others. However, adding a layer of security introduces potential inefficiencies that can frustrate clinicians and impede patient care.

Imprivata Confirm ID for Clinical Workflows transforms clinical authentication workflows by replacing passwords with fast, convenient methods such as the tap of a proximity badge or swipe of a fingerprint. The solution also integrates with leading EMRs and other clinical applications to give clinicians a seamless, authentication experience and create a robust audit trail for all transactions with patient health information.

With Imprivata Confirm ID for Clinical Workflows, organisations can improve security and compliance while increasing clinician satisfaction and allowing more time for patient care.

Seamless integration with leading EMRs and clinical applications

Imprivata Confirm ID for Clinical Workflows offers productised API-level integration with the leading EMRs and other clinical applications. This tight integration streamlines clinical authentication workflows for clinicians by making it easy and convenient to re-authenticate within their existing workflows. A single instance of Imprivata Confirm ID for Clinical Workflows will work across the ecosystem of EMRs and clinical applications, including Epic, InterSystems, TrakCare, WellSky EPMA, Modeus HS8, and Chipsoft HiX giving clinicians a consistent experience while reducing the total cost of IT ownership.

Fastest, most convenient two-factor authentication

Imprivata Confirm ID for Clinical Workflows offers the broadest range of convenient and innovative authentication options to best meet various clinical workflow requirements. Clinicians are only prompted for authentication methods that are available and allowed, which streamlines in-process authentication and improves efficiency. Some of the supported authentication options include:

- Proximity cards that enable authentication with the simple tap of a badge
- Fingerprint biometrics
- Multifactor authentication including badge tap and pin

Comprehensive auditing and reporting

Imprivata Confirm ID for Clinical Workflows offers detailed reporting capabilities to establish a secure, auditable chain of trust for clinical authentication workflows. Imprivata Confirm ID gives organisations better visibility into how, when, and where clinicians interact with patient health information to safeguard PHI and meet regulatory compliance requirements. Comprehensive reporting tools document the credential enrolment process and user authentication, storing the data in a centralised location for simplified compliance reporting.

Comprehensive identity and two-factor authentication

Imprivata Confirm ID for Clinical Workflows is part of a comprehensive identity and multifactor authentication platform for fast, secure authentication workflows across the healthcare enterprise. Imprivata Confirm ID makes security invisible by offering a broad range of innovative, convenient authentication methods, including badge tap and fingerprint biometrics. Imprivata Confirm ID combines security and convenience by enabling fast, secure authentication across enterprise workflows while creating a secure, auditable chain of trust wherever, whenever, and however users interact with patient records and other sensitive data.
