Proofpoint Meta

Secure Enterprise Access

KEY BENEFITS

- Experience cloud-delivered secure remote access with simple deployment, central policy management, and client and clientless modes for a seamless UX
- Leverage zero-trust security with adaptive controls and micro-segmented application access to isolate your network from threats
- Protect users and data on- and off-premise with a people-centric, software-defined perimeter
- Accelerate cloud migration with user-cloud access, multi-cloud connectivity and hybrid-cloud connectivity
- Make a strategic move with this first step to an always-on, zero-trust security architecture

Proofpoint Meta is the zero-trust alternative to VPN for secure remote access to any enterprise application, anywhere. With our people-centric solution, rapidly deploy access from user devices to applications in the data center and the cloud.

### Securing the Network for Today's Business

As applications move to the cloud and workers are increasingly mobile, IT teams need a better approach to providing secure application access than the conventional, site-centric VPN. Today we're creating a software-defined perimeter (SDP) and delivering network security from the cloud.

Zero-Trust Network in the Cloud

The first zero-trust enterprise network, Proofpoint Meta leverages a dense, cloud-native global backbone to deliver segment-of-one application access. If your organization is updating its network security from a site-centric to a user-centric delivery model, Proofpoint Meta provides the security, flexibility and user experience you need.

How it Works

Simply onboard your user devices and network resources to the global cloud network, and then define your access policies. All traffic is secured: access to private applications and subnets is protected by a software-defined perimeter per user, and internet traffic is protected by the security stack of your choice.
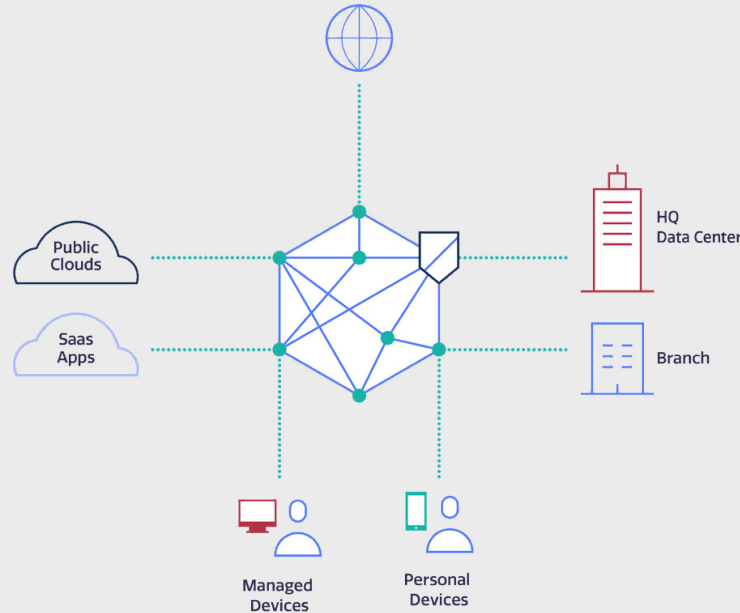

USE CASES

Next-generation VPN Alternative

With Proofpoint Meta, experience next-generation cloud-based VPN, delivered as a service. It provides micro-segmented, secure access for an exceptional user experience.

Cloud Migration

Eliminate the complexity of providing secure access when moving to cloud platforms, including Amazon AWS, Microsoft Azure, Google Cloud Platform and Oracle. With Proofpoint Meta, seamlessly set up large-scale, cross-cloud connections that are easy to manage and offer the highest levels of security.

Remote Access for Contractors

Easily enable third-party remote access for your contractors, partners and customers to the applications they need. At the same time, limit the risks associated with excessive privileges.

M&A Integration

Mergers and acquisitions often involve a sudden influx of new employees who need to gain access to your essential corporate resources as quickly and smoothly as possible. Instead of securing a physical perimeter, Proofpoint Meta creates a software-defined perimeter for each user.
